### Destination x Source Matrix

Use this as a Power BI matrix with conditional data bars and segment-level pricing.

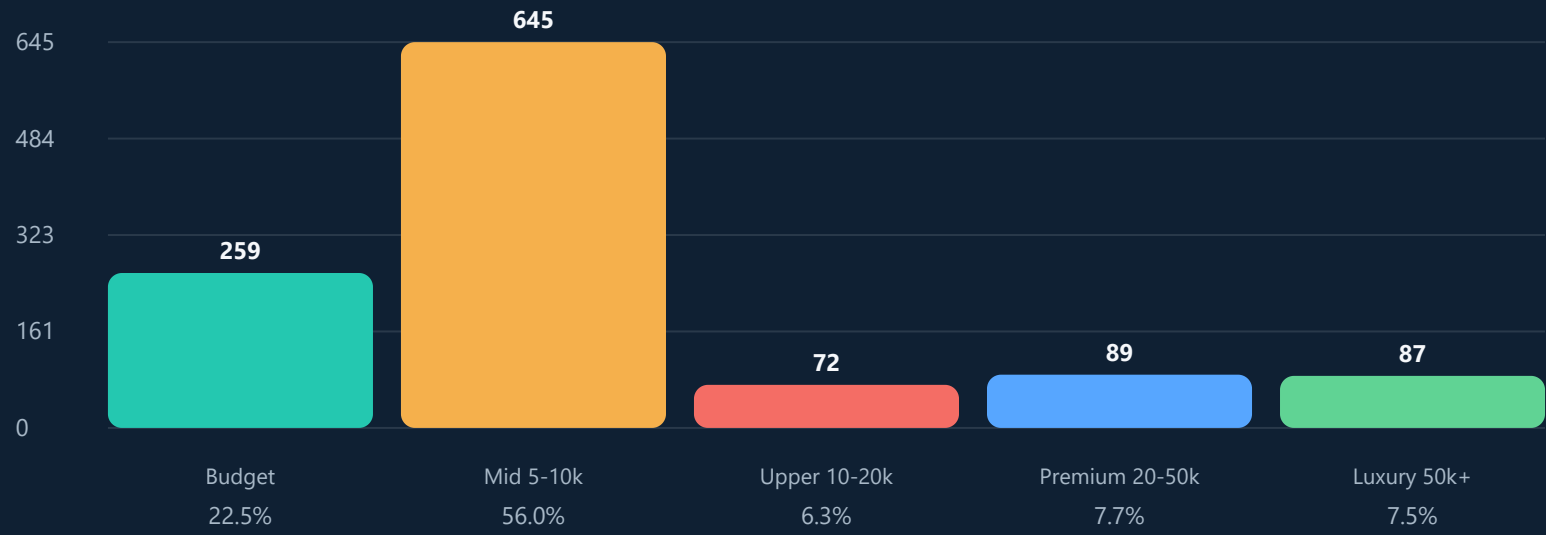

| Segment                  | Listings | Avg Price  | Avg Rating |
|--------------------------|----------|------------|------------|
| Alexandria / Booking     | 400      | 5,936 EGP  | 8.35       |
| Marsa Matruh / Booking   | 425      | 6,106 EGP  | 8.21       |
| North Coast / Airbnb     | 271      | 42,833 EGP | 8          |
| North Coast / Hotels.com | 56       | 9,382 EGP  | 8.22       |

## Price & Rating Distribution

Segmentation visuals for pricing strategy and recommendation logic

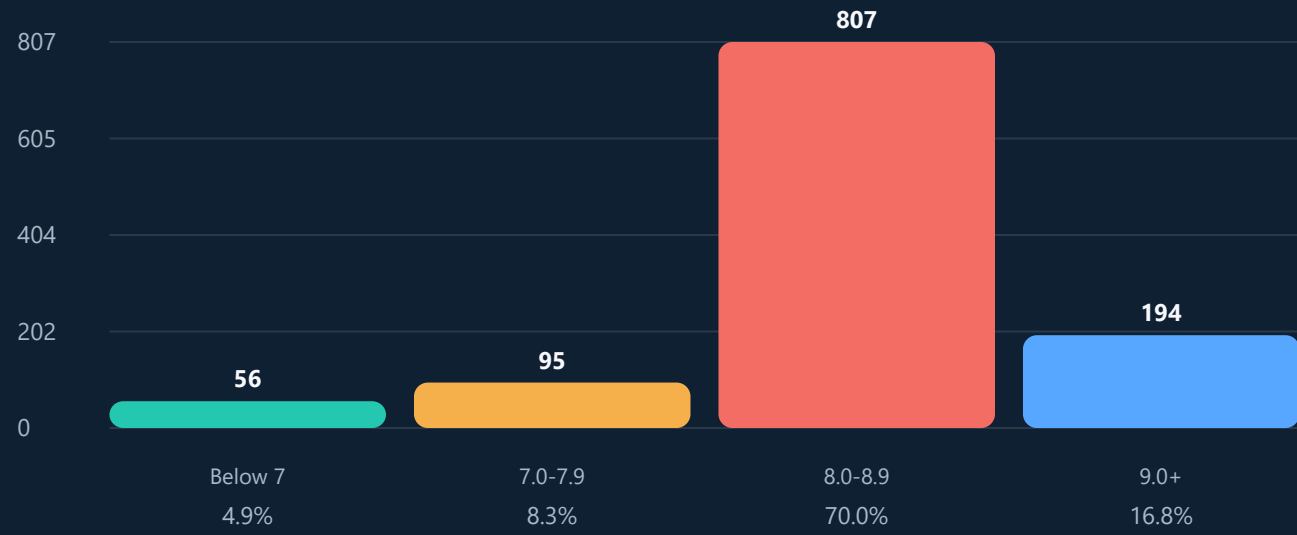

### Price Bands

Most rows sit in the 5k to 10k EGP band, with a visible luxury tail.

### Rating Bands

Ratings cluster strongly in the 8.0 to 8.9 band.

### Best Value Listings

Low price and high rating rows for future recommendation logic.

| Listing                                                                                        | Market                   | Price     | Rating |
|------------------------------------------------------------------------------------------------|--------------------------|-----------|--------|
| chalet in Porto Marina North Coast Holiday rental Sleeps 3 · 2 bedrooms Al-Hammam Pool Kitchen | North Coast / Hotels.com | 240 EGP   | 10     |
| Triumph White Sands Marsa Matrouh                                                              | North Coast / Hotels.com | 2,976 EGP | 9.4    |

|                                                                       |                        |           |     |

## Data Quality & Business Actions

Report page for ETL validation, coverage gaps, and next dashboard improvements

### Missing Data Profile

Core fields are complete; image coverage is the main enrichment gap.

|                |             |                     |
|----------------|-------------|---------------------|
| name           | <div></div> | 0 missing (0.0%)    |
| destination    | <div></div> | 0 missing (0.0%)    |
| source_website | <div></div> | 0 missing (0.0%)    |
| price_egp      | <div></div> | 0 missing (0.0%)    |
| rating         | <div></div> | 0 missing (0.0%)    |
| url            | <div></div> | 0 missing (0.0%)    |
| image_url      | <div></div> | 825 missing (71.6%) |

### Price Index vs Market

North Coast should be separated from standard coastal city pricing.

|              |                  |
|--------------|------------------|
| Marsa Matruh | <div></div> 0.4x |
| Alexandria   | <div></div> 0.4x |
| North Coast  | <div></div> 2.5x |

#### HIGH

Booking dominates coverage with 825 listings, equal to 71.6% of all rows.

Use Booking as the baseline for broad-market supply analysis, then compare Airbnb/Hotels.com as premium or specialized channels.

#### HIGH

North Coast average price is 37,104 EGP, far above Alexandria and Marsa Matruh at about 6,000 EGP.

Separate North Coast pricing into its own segment so high-end Airbnb listings do not distort overall market averages.

#### MEDIUM

Airbnb has the highest average price at 42,833 EGP and contributes all 271 Airbnb rows from North Coast.

Track Airbnb separately for luxury/villa pricing and use median price to control for extreme outliers.

#### MEDIUM

Ratings are broadly healthy: market average is 8.21 and each destination sits around 8.04-8.35.

Use rating bands to identify high-value properties, especially listings rated 9+ with prices below the market median.

#### MEDIUM

Image coverage is 28.4% overall because Booking rows have no image\_url while North Coast Airbnb/Hotels.com rows include images.

Treat image availability as a data enrichment backlog, not as a hotel quality signal.

#### DATA QUALITY

There are 202 unique hotel names across 1,152 rows, indicating repeated names and possible repeated scrape variants.

Add a property-key matching step before using unique-property metrics or deduplicated supply counts.
